

# PROFILE BALANCING

*We all have a few quirks in our features that we're not too confident about. Maybe a round or dented nose, flat lips, blunt chin, flat cheekbones, dark circles, etc. While these can be covered with makeup and contouring, it's a time consuming process and requires a lot of dedication and skill. What if you could get a well contoured face and full lips without the need of lipstick, concealers, highlighters or any kind of makeup as such. All of this can be possible with AgeLess Profile Balancing™.*

*Sometimes we all wonder why is it that some people photograph better than others. What is it about your friend that makes her photograph better even though you both are posing for the same picture in the same lighting. We just assume, they're more photogenic, but what is it that makes someone more or less photogenic? It's your Phi score or Golden Ratio that can be recognised by facial mapping that is known to be the most common determinant or attractiveness in a face. It has less to do with features and more to do with proportions if your lips, forehead, nose, chin, etc. Amber Heard, Kim Kardashian and Kate Moss are some popular celebrities with near perfect Phi ratios.*

*We have been getting a lot of questions on our Instagram about the different kinds of treatments we offer for AgeLess Profile Balancing. If you're also wondering what exactly AgeLess Profile Balancing or Non-surgical Face contouring is, this amazing non-surgical treatment offers various options to help conceal and improve your concerned areas and help you achieve a perfect Phi ratio with more symmetrical and proportionate features.*

*Some of the available and most popular options with Profile Balancing are:*

## » INSTANT DARK CIRCLE REDUCTION

Our biggest task while doing our makeup is often finding, mixing and applying the right concealer. Dark circles are often intensified due to hollows under the eyes which often increase the appearance of dark circles and make your eyes look sunken. You can now say goodbye dark circles as well as eye bags with the help of Instant Dark Circle Reduction. This treatment uses a combination of fillers, peels and lasers, as per your requirement to dramatically reduce the appearance and visible severity of your dark circles and even treat the hollows to give you fresher healthier looking eyes.

## » 15min NOSE JOB

Most noses are not symmetrical, but we all want a straight nose which is well pointed and not flat. Some of us have even injured our noses when we were younger, which has resulted in a funny story albeit a dented or crooked nose. Ageless 15min Nose Job is a non-surgical and as the name suggests, quick procedure to enhance your nose to make it straighter, pointier and proportionate to suit your face shape and overall face aesthetic.

## » LIP AUGMENTATION

Lip plumping is all the rage right now and rightly so; can you imagine Angelina Jolie without her signature pout?

This is what she would look like. Why would anyone want to imagine this? The shape of your lips is a big part of your face and should not be taken lightly. A lot of us have thin, flat, and disproportioned lips. While everyone imagines lip plumping to be a procedure to give you lips like Kylie Jenner, that could be true but unlike popular belief that is not the only case. Lip plumping or augmentation can be done subtly and artistically as well, with just a little bit of volume added to flat or disproportioned lips to make them look shapelier and proportionate. As for those who do want a full luscious pout, we're all for it!

## » CHIN AUGMENTATION

A rounded or blunt chin is not conventionally considered very attractive. Sure there's nothing wrong with a round chin but a pointed chiselled chin has been long known as the definition of a well-structured and symmetrical face. In Chin Augmentation, a little bit of filler is used to add volume in the right places to give you that perfect chin and jawline.

## » FACE CONTOURING

Face contouring with the help of make-up contouring kits, highlighters and different contouring sets is all anyone is talking about these days. If you've perfected the art of contouring (which is really not as easy as it appears) that's great for you, but if you're one of us mere mortals who find contouring tedious and cumbersome, non-surgical face contouring is something you should definitely consider. Filler and BOTOX are strategically added to your face to give a perfectly chiselled face with model high cheekbones, a pointed chin, a well-shaped nose, a well-defined jawline or whatever it is that you're trying to enhance or define.

## » FACE SLIMMING

Just the top of our head, we all can name at least 10 men and women we know who either pout or suck their cheeks in while taking a picture. This doesn't mean you're necessarily chubby, some of us have heart or round shaped faces, heavy cheeks or heavy jawlines. This becomes a struggle when you're comparing your face to those genetically blessed with longer thinner faces. With face slimming, you can get longer slimmer looking faces instantaneously, without any fat loss

## » GUMMY SMILE

A gummy smile is when your upper lip is slightly thinner and your gums can be seen every time you smile

This could make you conscious of smiling or laughing and often forces you to cover your mouth when you laugh or keep a tight lipped small smile. Gummy Smile Reduction uses botox to help you smile as wide and freely as you like while reducing the appearance of a gummy smile.

Non-surgical face contouring or profile balancing has so many more options than you can even imagine, go speak to your doctor and find out which of your concerns you can work on or how you can photograph better. All these treatments are completely non-surgical and are performed with the help of US FDA approved BOTOX, Fillers, and Threads.
